## Formal Languages and Automata Theory, SS 2018. Homework 8 (due Week 10)

- 0. Remaining exercises from Homework 7.
- 1. Prove that the following languages are not regular:
  - (a)  $L = \{0^i | i \ge 1 \text{ is a perfect square}\};$
  - (b)  $L = \{w | w \text{ is binary string with equal number of } 0's \text{ and } 1's\};$
  - (c)  $L = \{w|w \text{ is binary string of the form } 0^m1^n, m < n; m \ge 0, n \ge 0; m, n \text{ integer numbers}\};$
  - (d)  $L = \{0^{2^n} | n \ge 1\};$
  - (e)  $L = \{0^n | n \text{ is a prime numbers}\};$
  - (f)  $L = \{0^m 1^n 0^{m+n} | m \ge 1, n \ge 1\}.$
- 2. Consider the DFA from Course 8 slide 20 (https://merascu.github.io/links/SS2018FLAT/Course8\\_RegularLanguageProperties.pdf). Minimize it using the Table Filling Algorithm. Show all the steps of the algorithm.
- 3. Consider the following transition table for a DFA:

	0	1
$\rightarrow A$	B	$\overline{A}$
B	A	C
C	D	B
$^*D$	D	A
E	D	F
F	G	E
G	F	G
H	G	D

Construct the minimum-state equivalent DFA.
